

GET YOUR LIFE BACK

If you're like many of the millions who suffer from the symptoms of bruxism, or clenching and grinding your teeth at night, you're probably frustrated with the high cost of custom night guards, and the ineffectiveness of Over-The-Counter products.

Now you can get relief with a night guard that is:

- * Highly effective
- * Affordable
- * Comfortable
- * Easy to mold
- * Doesn't require multiple visits to the doctor.

INTRODUCING

SmartGuard® Night Guard was designed by a TMJ Dentist who has treated patients suffering from the symptoms of TMD for 18 years.

Unlike every other night guard found over-the-counter, as well as from dentists, SmartGuard® only covers the front teeth. This design relaxes the jaw muscles and dramatically reduces jaw clenching and grinding and reduces the associated symptoms.

SmartGuard® actually retrains the brain not to clench while you sleep!

SmartGuard® can be molded to your teeth in 10 minutes in our office today so you can start feeling relief tonight!

PATIENT EXPERIENCE

I have been wearing my new TMJ SmartGuard for about one month now and I definitely have to say that it beats my other, custom-made, mouth guard hands down. The first noticeable difference I experienced with the SmartGuard was that it immediately felt more comfortable in my mouth. This is because the SmartGuard is smaller and less cumbersome than my custom-made guard. I didn't expect a self-molded guard to fit as well as one modeled by a dentist but in fact it fit very well and has not fallen out of my mouth once since I started wearing it.

Michelle R.

“The SmartGuard® has truly been a life-saver for me! I have suffered from chronic TMJ pain for the past 4 years which just kept getting worse as time went on...”

-Jen

“Changed my life in a matter of hours...lo and behold, about two hours after I molded the product to my teeth and put it in, I realized that it was as if a switch had been flipped after nearly six years of suffering. I could suddenly hear better, see better, and even think more clearly. Apparently I was in much more pain than I had realized, and all the while it had been interfering with my cognition as well as my ability to function properly...”

-Steven
